1. Registration is a sign of quality in rabbit’s.
   A. True  B. False

2. The two small residual incisors just behind the normal top incisors are called.
   A. Peg teeth  B. Molars  C. Incisors

3. What is the Portion of the skeleton on which a rabbit walks or stands?
   A. Foot  B. Ankle  C. Leg

4. ______ is the ingesting (eating) of fecal material.
   A. Coprophagy  B. Colony  C. Cannibalism

5. The color of a rabbit determines ________________
   A. Condition  B. Variety  C. Breed

6. The A.R.B.A. recognizes _____ types of profile of rabbits.
   A. 3  B. 8  C. 5

7. A rabbit’s normal body temperature is ________?
   A. 92°F - 94°F  B. 102°F - 103°F  C. 84°F - 86°F

8. What percent of weigh is in the hindquarter of a dressed rabbit?
   A. 50%  B. 60%  C. 70%

9. Rabbits will eat more feed during ____________ temperatures.
   A. Warmer  B. Colder

10. ________________ is a written chart of the ancestors of a rabbit

11. The longer coarser hairs that extend above the undercoat are called.
    A. Crimp hair  B. Guard hairs  C. Stray hairs

12. Rabbits with this condition will have their head thrown back with open mouth breathing
    A. Coccidiosis  B. Ear canker  C. Heat Stress

13. Most of the digestion process takes place in the ________________.
    A. Small intestine  B. Stomach  C. Large intestine

14. A rabbit has a total of ______ pre-molars.

15. A coat that is shedding or molting a profusion of hairs is called.
    A. Molting  B. Loose coat  C. Slipping coat

16. ________________ fur has long, wool-type fibers that is collected and spun into yarn.

17. Discharge and matted fur at medial corner and under the lower eyelid is called.
    A. Sniffles  B. Sore eye  C. Weepy eye
18. According to the A.B.R.A. which meat class has rabbits that must be 6 months and over and a minimum weight over 8 lbs?
   A. Roaster      B. Fryer      C. Stewer

19. What household chemical should be used to clean your crocks?  ________________?

20. If a doe pulls fur between the 18th and 22nd day after mating, what does this indicate?
   A. Pseudopregnancy  B. Palpitation  C. Kindling

21. According to A.R.B.A. standards, which meat class has rabbits not over 10 weeks old & minimum weight of 3lbs. & not over 5lbs.?
   A. Roasters        B. Fryers      C. Stewers

22. In the rabbit’s skeletal system, there are _______ different bones?
   A. 45            B. 23          C. 32

23. If the fur just below the eye is wet & matted, the rabbit may have ________________.
   A. Conjunctivitis  B. Mastitis     C. Metritis

24. You should palpate your doe ________________ days after mating.
   A. 10            B. 14          C. 18

25. Handling rabbits when it is hot can cause ________________.
   A. Stress - Heat stroke  B. Molting – Mites  C. Poor coat - Smut

26. Using ________________ will help remove calcium deposits from rabbits cages.
   A. Bleach         B. Alcohol     C. Vinegar

27. Rabbits have a normal pulse rate within what range?
   A. 100 – 110      B. 120 – 130   C. 140 - 150

28. A lack of water causes ________________ food intake.
   A. Increased      B. Decreased   

29. The condition of fur lacking density in the under coat is called?
   A. Molting        B. Loose coat   C. Slipping coat

30. ________________ is a bacterial infection in the upper respiratory system
   A. Mastitis       B. Snuffles    C. weepy eye

31. According to A.R.B.A. Standards, which meat class has rabbits under 6 months old, & a minimum weight over 5 lbs. & not over 8 lbs?
   A. Roasters       B. Fryers      C. Stewers

32. ________________ is a method of checking by touch weather or not your doe is pregnant.
   A. Kindling       B. Palpating   C. Gestation

33. ______ is the physical state of a rabbit in reference to health, cleanliness, fur, & grooming.
   A. Prime         B. Coat        C. Condition

34. The A.R.B.A. Recognizes four types of fur?
   A. True          B. False
35. Different breeds have different posing positions/
   A. True  B. False

36. After kindling the first milk is higher in lactose and fat what is, it called.
   A. Colostrum  B. Lactolostrum  C. Enfamil

37. ____________________ is a bacterial infection in the mammary gland.
   A. Mastitis  B. Wry neck  C. Coprophagy

38. When a rabbit turns its head to the side & has a loss of balance, this could indicate what
   A. Ear mites  B. Weepy eye  C. Wry neck

39. Black oil sunflower seeds are a good source of ________________.
   A. Fat - Fiber  B. Protein - Vitamins  C. Salt - Oil
