

Introduction to Lakes

Michigan State University Extension announces the return of Introduction to Lakes, now online. Updated, reformatted and better than ever!

Explore the many dimensions of inland lakes—including riparian rights, shorelines, ecology, aquatic plants, and citizen involvement. The only prerequisite required is a passion for Michigan's 11,000 inland lakes!

Participants will:

- Understand the ecological and economic values associated with Michigan's inland lakes
- Recognize inland lake management is complex, multifaceted and requires stakeholder involvement
- Use federal, state, and local resources to help improve water quality

Each unit consists of closed captioned video lectures from MSU Extension inland lake experts, discussion forums, activities, additional resources, quizzes, and live chat sessions with instructors, partner resource experts, and classmates. Participants can earn a Certificate of Achievement. **This course has been approved for MDARD pesticide applicator, MDE SCECH & MSUE Citizen Planner credits.**

Learn More About Introduction to Lakes
